Scoring

Test	Score	Reason	Recomme
Content Security Policy (CSP)	0 ✓	Content Security Policy (CSP) implemented with unsafe sources inside style-src. This includes `'unsafe-inline'`, `data:` or overly broad sources such as `https`. `'form-action'` is set to `'self'`, `'none'` or `'specific source'`	Lock down `style` removing `'unsaf` `data:` and broad
Cookies	-	No cookies detected	None
Cross Origin Resource Sharing (CORS)	0 ✓	Content is not visible via cross-origin resource sharing (CORS) files or headers.	None
Redirection	0 ✓	Initial redirection is to HTTPS on same host, final destination is HTTPS	None
Referrer Policy	+5 ✓	`Referrer-Policy` header set to `no-referrer`, `same-origin`, `strict-origin` or `strict-origin-when-cross-origin`.	None
Strict Transport Security (HSTS)	−10 ✗	`Strict-Transport-Security` header set to less than six months (15768000).	Increase HSTS p
Subresource Integrity	+5 ✓	Subresource Integrity (SRI) is implemented and all scripts are loaded from a similar origin.	None
X-Content-Type-Options	0 ✓	`X-Content-Type-Options` header set to `nosniff`.	None

Test	Score	Reason	Recomme
X-Frame-Options	+5 ✓	`X-Frame-Options` (XFO) implemented via the CSP frame-ancestors directive.	None
Cross Origin Resource Policy	+10 ✓	Cross Origin Resource Policy (CORP) implemented, prevents leaks into cross-origin contexts.	None

CSP analysis

✓ Content Security Policy (CSP) implemented with unsafe sources inside style-src. This includes `'unsafe-inline'`, `data:` or overly broad sources such as `https`. `'form-action'` is set to `'self'`, `'none'` or `'specific source'`

Test	Result	Info
Blocks execution of inline JavaScript by not allowing `'unsafe-inline'` inside `script-src`	✓	Blocking the execution of inline JavaScript prov strongest protection against cross-site scriptin Moving JavaScript to external files can also he site more maintainable.
Blocks execution of JavaScript's `eval()` function by not allowing `'unsafe-eval'` inside `script-src`	✓	Blocking the use of JavaScript's `eval()` functic prevent the execution of untrusted code.
Blocks execution of plug-ins, using `object-src` restrictions	✓	Blocking the execution of plug-ins via `object-s` as inherited from `default-src` can prevent atta loading Flash or Java in the context of your pag
Blocks inline styles by not allowing `'unsafe-inline'` inside `style-src`	✗	Blocking inline styles can help prevent attacker modifying the contents or appearance of your p styles to external stylesheets can also help ma more maintainable.
Blocks loading of active content over HTTP or FTP	✓	Loading JavaScript or plugins can allow a man to execute arbitrary code or your website. Rest policy and changing links to HTTPS can help pr
Blocks loading of passive content over HTTP or FTP	✓	This site's Content Security Policy allows the lo passive content such as images or videos over protocols such as HTTP or FTP. Consider chan load them over HTTPS.
Clickjacking protection, using `frame-ancestors`	✓	The use of CSP's `frame-ancestors` directive of grained control over who can frame your site.
Deny by default, using `default-src 'none'`	✗	Denying by default using `default-src 'none'` your Content Security Policy doesn't allow the resources you didn't intend to allow.

Test	Result	Info
Restricts use of the `<base>` tag by using `base-uri 'none'`, `base-uri 'self'`, or specific origins.	✓	The `<base>` tag can be used to trick your site in scripts from untrusted origins.
Restricts where `<form>` contents may be submitted by using `form-action 'none'`, `form-action 'self'`, or specific URIs	✓	Malicious JavaScript or content injection could sensitive form data is submitted to or create ad for data exfiltration.
Uses CSP3's `'strict-dynamic'` directive to allow dynamic script loading (optional)	-	`'strict-dynamic'` lets you use a JavaScript sh load all your site's JavaScript dynamically, with track `script-src` origins.
